BIOGRAPHICAL SKETCH

Provide the following information for the Senior/key personnel and other significant contributors. Follow this format for each person. **DO NOT EXCEED FIVE PAGES.**

NAME: Krauter, Kenneth S.

eRA COMMONS USER NAME (credential, e.g., agency login): Krauter

POSITION TITLE: Professor

EDUCATION/TRAINING (Begin with baccalaureate or other initial professional education, such as nursing, include postdoctoral training and residency training if applicable. Add/delete rows as necessary.)

INSTITUTION AND LOCATION	DEGREE (if applicable)	Completion Date MM/YYYY	FIELD OF STUDY
SUNY at Stony Brook, NY	B.Sc.	1974	Biochemistry
Albert Einstein College of Medicine	Ph.D.	1980	Cell Biology
Rockefeller University	Postdoc	1984	Mol. Cell Biology

A. Personal Statement

My current research involves next-generation sequencing of microbial populations for metagenomic studies (gut and oral) as well as in GWAS and heritability studies to discover genes involved in complex human traits. Our overall motivation is to understand interactions between microbes and human genes and environment. Especially how changes in microbes over time or in response to environment can affect human complex phenotypes like behavior, mood, obesity, metabolism and oral diseases. I am the director of the Departmental Computing Facility, the University Genotyping Facility. I bring a background in molecular genetics, biochemistry, computation and experience managing large human sample sets to this project.

B. Positions and honors

1985-1990 Assistant Professor, Department of Cell Biology, Albert Einstein College of Medicine

1990-1995 Associate Professor, Department of Cell Biology, Albert Einstein Coll. Of Med.

1995-present Professor, Department of Molec. Cell. and Dev. Biology, U. of Colorado, Boulder

2000-present Faculty Fellow, The Institute for Behavioral Genetics, U. of Colorado, Boulder

1999-2004 NIH Training Grant Review Panel

2005-2009 NIH K99/R00 Pathway to Independence Panel

2007-2008 National Academies Education Fellow in the Life Sciences

2019 University of Colorado Graduate Student Mentor of the Year

Other Experience and Professional Memberships

1995-present Director CU DNA Sequencing facility

1997-present Director CU Genotyping facility 2002-present Co-director Gene Chip facility

2004-2008 Director of MCDB Graduate Program

2008-present Biofrontiers Council

2010-2013 Promotions and Tenure Committee, CU College of Arts and Sciences

2010-2019 Director of MCDB Graduate Program

2010-present MCDB Executive Committe 2019-preset Associate Chair MCDB

C. Contributions to Science

- 1. My early research was in the broad area of mammalian gene regulation. Our efforts were among the first groups to utilize in vitro nuclear run-on experiments to assess rates of gene transcription in animal tissues. We used this work to examine the regulation of tissue-specific gene expression in a variety of mouse model systems including liver and xenobiotic responses.

- 2. In the early 1990s, I made the decision to turn my research in an entirely new direction and began work on the Human Genome Project, and in particular high-throughput approaches to creating integrated genetic and physical maps of human chromosomes for the purpose of complete genome sequencing. We established one of the original 4 or 5 Human Genome Institute Chromosome centers focused on chromosome 12. We implemented and improved computational and molecular approaches to carrying out this mapping accurately and efficiently.

- 3. After moving from Albert Einstein College of Medicine in New York, to the University of Colorado in Boulder, my research interests shifted again to the study of the genetics of complex traits in humans. I became a co-Investigator responsible for all genotyping and sample analyses for a nearly 15 year long center program focused on determining genetic contribution to human drug dependence.

- 4. In the past few years the focus of my lab has shifted to the study of the influence of human genes on the oral and gut microbiomes in the context of a variety of environmental exposures including drug use, alcohol, and diet. While this is a slightly new direction for our research, we have already produce one high-impact twin study and two others are in preparation. It is clear from our work and that of our collaborators that genes have clear affects on the composition of the microbes in a variety of human niches.
