Current research activities

Research in my laboratory is on the physics of very small or reduced dimensional solid state systems and associated electronic and optical devices. Current research is in the areas of nanotechnology and materials-by-design in molecular solids. One graduate student, Jack Houlton is presently pursuing his Ph.D. in levitation, trapping, cooling and the properties of gallium nitride nanowires in my lab: A second graduate student, Teddy Tortorici (on leave), is studying the dielectric properties of dipolar molecules in molecular solids. Recent Ph. D. graduates are Drs. Ke Zhao (dielectric spectroscopy of rotor solids), Jason Gray, and Joshua Montague (Gallium Nitride nanowires in electromechanical sensor applications). Dr. Long He completed his Ph. D. in 2014 with a thesis on using nonlinear optics and femtosecond pulsed lasers to study buried interfaces in silicon photovoltaic systems (in collaboration with NREL researchers Chaz Teplin and Howard Branz).
