

**BIOGRAPHICAL SKETCH AND PROFESSIONAL ACTIVITIES**  
**University of Colorado at Boulder**

- I.**   **Name:** Kenneth E. Jansen                             **Department:** Aerospace Engineering Sciences  
         **Current Rank:** Full Professor                     **School:** Engineering  
         **Phone:** (303) 492-4359                            **Email:** [jansenke@colorado.edu](mailto:jansenke@colorado.edu)

**Educational Preparation**

- 9/93    Ph.D. in Mechanical Engineering, Division of Applied Mechanics, with minor in Aeronautics and Astronautics, Stanford University, Stanford, CA.  
6/88    M.S. in Mechanical Engineering, Stanford University, Stanford, CA.  
5/87    B.S. in Mechanical Engineering, University of Missouri-Columbia, Columbia, MO.

**II.**   **Professional Experience**

- 1/10-present *Full Professor*, Department of Aerospace Engineering Sciences. Joint appointment to Department of Computer Science. University of Colorado, Boulder.
- 12/07-1/10 *Full Professor*, Department of Mechanical, Aerospace and Nuclear Engineering, with joint appointments in Biomedical Engineering, Computer Science and in Information Technology, Rensselaer Polytechnic Institute
- 12/01-12/07 *Associate Professor*, Department of Mechanical, Aeronautical and Nuclear Engineering, with joint appointments in Biomedical Engineering, Computer Science and in Information Technology, Rensselaer Polytechnic Institute
- 8/96-12/01 *Assistant Professor*, Department of Mechanical Engineering with joint appointments in Computer Science (2001) and in Information Technology (1998), Rensselaer Polytechnic Institute
- 9/93-8/96 *Post-doctoral Fellowship*, Center for Turbulence Research, NASA Ames/Stanford University. Large-eddy simulation utilizing unstructured-grid finite element methods.
- 8/88-9/93 *Research Assistant*, Stanford University, Dissertation research: Reynolds-averaged Navier-Stokes equations modeling with the finite element method.
- 9/92-6/93 *Course Assistant*, (Finite Element Methods in Fluid Mechanics, graduate level), Stanford University.
- 5/87-9/87 and 6/88-9/88 *Summer Internship*, McDonnell Douglas Aerospace Corporation, St. Louis, MO.

### **III. Honors and Awards**

"Most Comprehensive Flow Visualization Animation", AIAA CFD Flow Visualization Event, AIAA-AVIATION17, "Interaction of a Synthetic Jet Actuator on a Separated Flow Over a Vertical Tail", Jansen, K.E., Rasquin, M. Farnsworth, J.A., Rathay, N., Mastriano, M., Amitay, M, associated with paper AIAA-3243.

AIAA Associate Fellow 2011

Boeing Supplier of the Year 2011 in the technology category (1 per year, given to RPI based collaborating work)

Rensselaer School of Engineering Faculty Research Award 2009

Young Investigator Award from the International Association for Computational Mechanics, September 2004.

The Lewis T. Assini Undergraduate Teaching and Counseling Award from the Department of Mechanical, Aerospace and Nuclear Engineering at Rensselaer Polytechnic Institute, May 2004.

National Science Foundation CAREER Award awarded on 2/1/00.

R.H. Gallagher Young Investigator Award from the United States Association of Computational Mechanics for 2001.

Scientific Program Committee for the Seventh and Eighth U.S. National Congress on Computational Mechanics 7/03 and 7/05.

Scientific Committee Member for the First and Second AFOSR International Conference on Direct Numerical Simulation and Large Eddy Simulation, 8/97 and 6/99.

Office of Naval Research Graduate Student Fellowship (8/87-1/91).

National Science Foundation Graduate Student Fellowship (8/87 declined to accept ONR).

## IV. Teaching

### A. Student Thesis Supervision

#### Thesis Completed – Masters

David Pope, “Implementing a Loosely Coupled Fluid Structure Interaction Finite Element Model in PHASTA” (2015)

Nicholas Mati, “Numerical Investigation of Subsonic Flow through an Aggressive Flat Bottom Diffuser” (2014)

Jeff Martin, “Numerical Analysis of Synthetic Jet Flow Control on a Vertical Tail” (2012)

John A. Evans, “Multiscale and Stabilized Methods for Steady Fourth Order Problems in Fluid Dynamics” (2006) Faculty at University of Colorado Boulder.

Onkar Sahni, “An Anisotropic Adaptive Procedure for Efficient Blood Flow Simulations” (2004) (Co-advised with Shephard)

Fatih Uygur Danacioglu, “A New Matrix of Intrinsic Time Scales for Advection-Diffusion Systems” (2003)

Dave Corson, “Prediction of Complex 3-Dimensional Flows Using the  $k$ - $\epsilon$ - $v^2$  Turbulence Model” (2002)

Michael Yaworski, “Performance of Near-Wall Modeling Techniques in Reynolds-Averaged Navier Stokes Simulations” (2001)

Jurijs Bazilevs, “Comparison of Equal and Mixed-order Stabilized FEM Formulations for Incompressible Flow” (2001) Faculty at Brown University.

Dali Wang, “Investigation of Reynolds Averaged Mean Values and Fluctuations of Turbulent Flows in Liquid Encapsulated Czochralski (LEC) Crystal Growth Systems” (2001)

Anil Karanam, “Hierarchical Hexahedral Elements for Fluid Dynamics Simulations Using Stabilized Finite Element Methods” (2000)

Panagiotas Lapatas, “Effect of Mixed Element Topology with Hierarchical Basis on Computational Fluid Dynamics Solutions” (2000)

Saurabh S.Tendulkar, “A Performance Analysis of Sparse Iterative Linear Solvers for the Compressible Navier-Stokes Equations” (1999)

### **Thesis Supervisor – Masters**

Benjamin Wright (RPI)  
Benjamin Matthews (UCB) - Computer Science

### **Thesis Completed – Doctoral**

Felix Newberry “Multi-Fidelity Uncertainty Quantification: Model Design and Software Tools for Immersive Simulations” (2021)

Corey Wetterer-Nelson “Interactive Geometric Domain Iteration of Massively Parallel CFD Simulations “ (2021)

Riccardo Balin “Physics and Modeling of Turbulent Boundary Layer Flows Under Strong Pressure Gradients” (2020)

Meredith Purser “A Study of Methods for Improving Volume Conservation in Incompressible Two-Phase Flow on Unstructured Meshes” (2019)

Kyle Woolwine, “Reduced Order Model of an External Compression Supersonic Engine Inlet” (2016)

Kedar Chitale, “Anisotropic Mesh Adaptivity for Turbulent Flows with Boundary Layers” (2013)

Yi Chen, “Subsonic Flows through S-Ducts with Flow Control” (2012)

Farhad Behafarid, “Multi-Scale, Multi-Physics Simulation of Gas Injection into the Liquid Using DNS/Level Set Method” (2012)

Victor Marrero, “Non-Newtonian Studies of Patient-Based Cardiovascular Models Using a Stabilized Finite Element Flowsolver” (2010)

Joseph Rodriguez, “Numerical Simulation of Two-Phase Annular Flow” (2010)

Min Zhou, “Petascale Adaptive Computational Fluid Dynamics” (2010)

Igor Bolotnov, “Cascade Modeling of Single and Two-Phase Turbulence” (2008)  
(co-advised with R.T. Lahey)

Chun Sun, “Parallel Algebraic Multigrid for the Pressure Poisson Equation in a Finite Element Navier-Stokes Solver” (2008)

Anil Kumar Karanam, “A P-adaptive Stabilized Finite Element Method for Fluid Dynamics” (2008)

Guillermo Araya, “DNS of Turbulent Heat Transfer in Wall Bounded Flows” (2008) (co-advised with L.Castillo) Tenured Professor at University of Puerto-Rico Mayaguez

Onkar Sahni, “Automated Adaptive Viscous Flow Simulations” (2007) (co-advised with M.S. Shephard)

Azat Galimov, “An Analysis of Interfacial Waves and Air Ingestion Mechanisms” (2007) (co-advised with R.T. Lahey)

Irene E. Vignon-Clementel, “A Coupled Multidomain Method for Computational Modeling of Blood Flow”, (2006) (co-advised with C.A. Taylor at Stanford University) Faculty at INRIA Sorbonne.

C. Alberto Figueroa, “A Coupled-Momentum Method to Model Blood Flow and Vessel Deformation in Human Arteries: Applications in Disease Research and Simulation-Based Medical Planning”, (2006) (co-advised with C.A. Taylor at Stanford University) Tenured Professor at University of Michigan.

Elaine Bohr, “Inflow Generation Technique for Large Eddy Simulation of Turbulent Boundary Layers”, (2005)

Sunitha Nagrath, “Adaptive Stabilized Finite Element Analysis of Multi-phase Flows using a Level Set Approach” (2004) Tenured Professor at University of Michigan.

Juin Kim, “Studies of Non-Newtonian Fluid Flows with a Stabilized Finite Element Method” (2003)

Andres Tejada-Martinez, “Dynamic Subgrid-Scale Modeling in Large-Eddy Simulation of Turbulent Flows with a Stabilized Finite Element Method” (2002) Tenured Professor at University of South Florida.

Je-Hoon Kim, “Fin Shape Effects in Turbulent Heat Transfer in Tubes with Helical Fins” (2000) (co-advised with M. Jensen)

Christian H. Whiting, “Stabilized Finite Element Methods for Fluid Dynamics Using a Hierarchic Basis” (1999)

### **Thesis Supervisor - Doctoral**

Joseph Pointer (joint with Brian Argrow)  
James Wright (joint with John Evans)  
Aviral Prakash (joint with John Evans)  
Mark Blanco (joint with John Farnsworth)  
Leila Ghaffari (joint with Jed Brown)  
Dasha Gloutak (joint with John Farnsworth)  
Connor Morency

### **Thesis Committee Member**

Viswanath Ramakkagari (RPI)  
Emilie Marchandise (Univeritie Catholic Louvain, Belgium)  
Anne Amblard (I.N.S.A. de Lyon, France)  
Xiarong Li (RPI)  
Rob Lotz (RPI)  
Yong Qu (RPI)  
Thomas Giddings (RPI)  
Takumi Hawa (RPI)  
Rao Garimella (RPI)  
Xiaoyue Liu (RPI)  
Mustafa Dindar (RPI)  
Zhen Wang (RPI)  
Ting Xie (RPI)  
Xiaoqing Ge (RPI)  
Aleksandr Ovcharenko (RPI)  
Kevin Basore  
Tim Jung  
Scott Waggy  
Charles Woods  
Tara Gallaway (RPI)  
Jing Fu (RPI) Christopher Cooley  
Eric Peters  
Ethan Culler  
Joseph Straccia  
Luke Engvall  
Daniel Gretz Bateman

### **C. Course and Curriculum Development**

MEAE-6965 Turbulence Modeling was a completely new course.

MEAE-6963 Finite Elements in Fluid Dynamics was a completely new course.

MEAE-6720 Computational Fluid Dynamics was a significant overhaul of existing course in catalog.

ENGR-1100 Introduction to Engineering Analysis: assisted in conversion from traditional delivery to current laptop/studio delivery.

### **V. Publications**

#### **A. Books, Monographs, Recordings, Large Scale Musical or Video Works, Commissions**

1. Numerical Methods in Turbulence Simulation, Jansen, K.E. and Brown, J., “Chapter 5 Finite Element Methods for Turbulence”, (ed. R.M. Moser), Elsevier (2022),
2. Exascale Scientific Applications: Scalability and Performance Portability, CRC Press, Jansen, KE, Rasquin M, Brown J, Smith C, Shephard MS, Carothers C. "Chapter 15 Extreme Scale Unstructured Adaptive CFD for Aerodynamic Flow Control." Ed. Straatsma TP; Antypas KB; Williams TJ. (November 13, 2017).
3. Direct and Large-Eddy Simulation IX, Springer, Dechamps, X, Rasquin, M, Jansen, KE, and Degrez, G, (Contributed a Chapter entitled “Numerical Study of Turbulent Pipe Flow with Transverse Magnetic Field Using a Spectral/Finite Element Solver”), Ed. Frohlich, J, Springer, (2015).
4. Finite Element Methods, 1970’s and Beyond, L.P. Franca Ed. CIMNE, Barcelona, Spain (2004) (Contributed a Chapter entitled “A Look at Turbulence from the Finite Element Perspective”).
5. Finite Element Flow Simulation, Takashi Nomura Ed., Springer-Verlag Tokyo, Japan, 1998, (Contributing author of Chapter 7 with Hughes, TJR, Johan, Z, and Hauke, G.)
6. Computational Nonlinear Mechanics in Aerospace Engineering, (ed. S.N. Atluri), AIAA, Washington D.C. (1992), (Contributing author of Chapter 5, “Fast projection algorithm for unstructured meshes” with Shakib, F, and Hughes, TJR)

**VII. Editorship of Journals, Reviews of Manuscript, Book, Research Proposals, Curating and Jurving Exhibitions**

*Editorial Board/Advisory Editor for:*

Computer Methods in Applied Mechanics and Engineering

*Frequent reviewer for:*

Computer Methods in Applied Mechanics and Engineering,

Theoretical and Computational Fluid Dynamics

Journal of Computational Physics,

AIAA Journal,

Physics of Fluids,

International Journal of Numerical Methods in Fluids,

Computational Mechanics

*Less frequently:*

Thin Solid Films,

Journal of Crystal Growth.

## VIII. Service

### A. Service to University

#### 1. University, School, and Departmental Committees

##### Departmental

1. Aero Program Director (2007-present)
2. Rensselaer Medal Day (2005)
3. Served on two faculty search committees.
4. Y2K Department Coordinator, F98-2000.
5. Thermo-Fluids Committee since F96.
6. Aero Committee since F96.

##### School

1. Compensation Committee 2003
2. Associate Director of SCOREC
3. Diversity Planning Committee F00

##### University

1. Extensive effort toward determining the best configuration of the Computational Center for Nanotechnology Innovation (CCNI) (2006)
2. Capital Campaign Road Trip to San Jose, CA (Fundraising) 2/2005
3. Biotech Building GALA/Capital Campaign Kickoff: Developed and delivered one of only 3 featured research presentations at Gala Dinner (9/2004)
4. Presentations to Provost VIP's (4 times in 2003, 2 times in 2004, 2 time in 2005, 2 times in 2006)
5. Faculty Access to Research Information Committee 2005
6. Faculty Senate 1998-2000.

#### 2. Undergraduate Student Advising and Counseling

SoE Orientation for class of 2001, 2005, and 2009  
Advising 29 from class of 2001, 32 from class of 2005, and 33 from 2009  
Faculty Intervention Program (with the Advising and Learning Assistance Center).

#### 3. Non-thesis Graduate Student Advising and Counseling

Guangyu Shi, conferred M.Eng. 9/00

### B. Professional Societies

Supercomputing 2013, Technical Committee: Reviewed 8 papers then participated in 2-day panel to down-select and choose papers to be accepted.

SIAM Parallel Processing for Scientific Computing, conference session organizer (2 sessions in 2010 **Scaling Challenges in Massively Parallel Computing for Scientific Applications** and 3 sessions in 2012 **Challenges in Massively Parallel Simulations using Unstructured Meshes**).

United States Association for Computational Mechanics (Symposium Organizer and session chair)

Tau Beta Pi (Former Chapter President 1986-1987)

Pi Tau Sigma

American Society of Mechanical Engineers

American Physical Society (Session Chair)

American Institute of Aeronautics and Astronautics (Senior Member).

American Society of Civil Engineers (Computational Mechanics Technical Committee).

## IX. Professional and Public Lectures

### Invited

1. “Scale Resolving Simulations of a Bump with Strong Favorable and Adverse Pressure Gradients”, Jansen, KE, Balin, R., Wright, JR, and Evans, JA, *Keynote at the 16th US National Congress on Computational Mechanics*; Chicago, IL, USA; July 27, 2021.
2. “Scale Resolving Simulations of Strong Favorable and Adverse Pressure Gradients”, Jansen, KE, Balin, R., Wright, JR, Prakash, A., Evans, JA, and Spalart, P.R. *2<sup>nd</sup> High Fidelity Industrial LES/DNS Symposium* Toulouse, France; September 22-24, 2021.
3. “Hybrid Turbulence Model Computations of the NASA Juncture Flow Model using PHASTA”, Balin, R, Wright, J, Patterson, J, Farnsworth, JA, Evans, JA, Lakhani, R, Spalart, PR, and Jansen KE, 2020 AIAA Scitech 2020 Forum, 2020-1777.
4. “Exascale Turbulence Simulations: From Fundamental Flows to Flight Scale Aerodynamics”, Jansen, KE, Balin, R, Evans, J, and Spalart, P, *Bulletin of the American Physical Society (APS-DFD)* 2019.
5. “Massively Parallel Simulation of Aerodynamic Flow Control”, Jansen, KE, CAUSE Distinguished Lecture, University of Puerto Rico Mayaguez, May, 8, 2017.
6. “DDES Applications to High-Lift and Active Flow Control”, Jansen, KE, *NASA Langley*, October 9, 2015.
7. “An Introduction to the PHASTA Flow Solver”, Jansen, KE, *Boeing Webinar*, September 3, 2015.
8. “Massively Parallel Multiphase Flow Modeling with a Stabilized Finite Element Method”, Jansen, KE, Behafarid, F, Rodriguez, J, Podowski, M, Sahni, O, Lahey Jr., RT, Shephard, MS, *Keynote at the 11th US National Congress on Computational Mechanics*; Minneapolis, MN, USA; July 25-28, 2011.
9. “Interactive visualization strategies for a live unstructured grid CFD simulation at 160K cores of a Blue Gene/P supercomputer and 800 cores of an analysis cluster”, Raquin, M, Marion, P, Vishwanath, V, Matthews, B, Loy, R, Bauer, A, Zhou, M, Sahni, O, Fu, J, Liu, N, Carothers, C, Shephard, M, Hereld, M, Papka, M, Kumaran, K, Geveci, B, and Jansen, KE, *Ecole Polytechnique Federale de Lausanne, Blue Brain Project*; Lausanne, Switzerland; 12 January 2012.
10. “A Comparison of In Situ Data Extraction versus Full Data Co-visualization at Full Machine Scale from a Live Unstructured Grid CFD Simulation”, Rasquin, M, Marion, P, Vishwanath, V, Matthews, B, Loy, R, Bauer, A, Zhou, M, Sahni, O, Fu, J, Liu, N, Carothers, C, Shephard, M, Hereld, M, Papka, M, Kumaran, K, Geveci, B, and Jansen, KE, *Ultrascale Visualization Workshop at the International Conference for High Performance Computing, Networking, Storage and Analysis*; Seattle, WS, USA; November 12-18, 2011.
11. “Adaptive Computational Fluid Dynamics: Petascale and Beyond”, Jansen, KE, Sahni, O, Ovcharenko, A, Shephard, MS, Zhou, M, *SciDAC 2010*, Chattanooga, TN.
12. “CFD, Hardware, and Scalability: Barriers, Challenges, and Opportunities”, Jansen, KE, *Keynote at ASME Ocean, Offshore, and Arctic Engineering (OMAE)*, June 2009
13. “Anisotropic, Adaptive, Implicit CFD”, Jansen, KE, *Science Track at Teragrid '09*, June 2009.
14. “Petascale Adaptive Computational Fluid Dynamics”, Jansen, KE, *Pathways to Blue Waters: Communication Intensive Algorithms and Applications*, Champaign, IL, October 2008.
15. “Toward Petascale Adaptive Computational Fluid Dynamics”, Jansen, KE, *High Performance Computation Workshop: The role of high performance Computation in Economic Development*, Troy, NY, October 2008.
16. “Virtual Surgical Planning: Computing Blood flow within Real Patient Geometries”, Jansen, KE, *INSA LAMCOS Seminar Series*, Lyon, France, November 2006.

17. "Large Eddy Simulation with the Finite Element Method", Jansen, KE, *17<sup>th</sup> AIAA Computational Fluid Dynamics Conference*, Toronto, Ontario, CA, June 2005.
18. "A Look at Turbulence from the Finite Element Perspective", Jansen, KE, *A Conference Celebrating the 60<sup>th</sup> Birthday of Thomas J.R. Hughes*, Rice University, 2004.
19. "Computing Blood Flow within Real Patient Geometries", Jansen, KE, Shephard, MS, Mueller, J, Sahni, O, *At the ASME Heat Transfer Fluids Engineering Summer Conference*, Charlotte, NC, July 2004.
20. "Cardiovascular Flow Simulation", Jansen, KE, Shephard, MS, Mueller, J, Sahni, O, and Taylor, CA, *At the NSF Biotransport Process Workshop*, Arlington, VA, May 2004.
21. "A Comparison of the Accuracy and Efficiency of DG and SUPG Methods", Jansen, KE, Shephard, MS, and Flaherty, JE, *16<sup>th</sup> AIAA Computational Fluid Dynamics Conference*, Orlando FL June 2003.
22. "Virtual Surgical Planning: Computing Blood Flow within Real Patient Geometries", Jansen, KE, Clarkson Seminar Series, Sept. 2003.
23. "Variational Multiscale Models for LES on Unstructured Grids," Jansen, KE, given at Centro Internazionale Matematico Estivo Course: Multiscale Problems and Methods in Numerical Simulations, Martina Franca, Italy, Sept. 9-15, 2001.
24. "LES with A Stabilized Finite Element Method," Jansen, KE, given at General Electric Corporate Research and Development, Schenectady, NY, 5/99.
25. "Simulation Of Turbulent Flow Using Unstructured Grids," Jansen, KE, given at Cornell Fluid Mechanics Colloquium, Ithaca, NY, 3/99.
26. "Computation of Turbulence with Stabilized Methods," Jansen, KE, given at The Institute for Industrial Science, Tokyo, Japan, 4/98.
27. "Computation of Turbulence with Stabilized Methods," Jansen, KE, given at 4th Japan-US Symposium on Finite Element Methods in Large Scale Computational Fluid Dynamics, Tokyo, Japan, 4/98.
28. "Computing Turbulence," Jansen, KE, given at Rensselaer Polytechnic Institute Department of Mechanical Engineering, Aeronautical Engineering and Mechanics Colloquium, Troy, NY, 9/97.
29. "Large Eddy Simulation Using Unstructured Grids," Jansen, KE, given at The First AFOSR International Conference on DNS/LES, Ruston, LA, 7/97.
30. "The Role of Entropy in Turbulence And Stabilized Finite Element Methods," Jansen, KE, given at Centro Polytecnico Superior-Zaragoza Applied Math Colloquium, Zaragoza, Spain, 3/97.
31. "Computing Turbulence Using Finite Element Methods On Unstructured Grids," Jansen, KE, given at Centro Polytecnico Superior-Zaragoza Applied Math Colloquium, Zaragoza, Spain, 3/97.

23. "Compressibility effect on thermal coherent structures in spatially-developing turbulent boundary layers via DNS.", Araya JG, and Jansen, KE, *Bulletin of the American Physical Society (APS-DFD, 2017 - )*: American Physical Society, 2017
24. "U. Colorado Contribution to HiLiftPW3.", Wurst, S, Balin R, Skinner, R, and Jansen, KE, 3rd High Lift Prediction Workshop, Denver, CO, June3-4, 2017
25. "Extreme Scale Stabilized Finite Element Flow Simulations", Jansen, KE, Rasquin, M, Smith, CW, Matthews, B, ECCOMAS Congress 2016, Crete, GR, June 6, 2016.
26. "Higher Order Stabilized Finite Element Methods for Cardiovascular Flow", Jansen, KE, Kim, HJ, ECCOMAS Congress 2016, Crete, GR, June 7, 2016.
27. "Scaling Unstructured Mesh Computations", Jansen, KE, Brown, J, Rasquin, M, Matthews, B, Smith, CW, Ibanez, D, Shephard, MS, SIAM Parallel Processing, Paris, FR, April 14, 2016.
28. "Modeling Strategies of Active Flow Control Applied to a Realistic Wing Design", Jansen, KE, and Rasquin, M, *13th US National Congress on Computational Mechanics*; Minneapolis, MN, USA; July 26-30, 2015
29. "Massively Parallel Flow Simulation Using PETSc", Rasquin, M, Matthews, B, Smith, CW, Brown, J, and Jansen, KE, SIAM CS&E, Salt Lake City, UT, March 15, 2015
30. "Demo of Adaptive Detached Eddy Simulation of a High-Lift Wing with Active Flow Control", Martin, D, Rasquin, M, Jansen, KE, NUFO Science Exposition, Washington, D.C., June (2014) (our ALCF INCITE project was selected as the live demonstration to congress and upper management of DOE of Argonne Leadership-Class Computing Facilities capabilities in simulation and visualization).
31. "Boundary Layer Adaptivity For Incompressible Turbulent Flows.", Chitale, KC, Rasquin, M, Sahni, O, Shephard, MS, and Jansen, KE, *World Congress of Computational Mechanics*, (2014).
32. "Anisotropic boundary layer adaptivity of multi-element wings", Chitale, KC, Rasquin, M, Sahni, O, Shephard, MS, and Jansen, KE, *52nd Aerospace Sciences Meeting* (2014).
33. "Finite Element Flow Simulations of the EUROLIFT DLR-F11 High Lift Configuration", Chitale, KC, Rasquin, M, Martin, J, and Jansen, KE *52nd Aerospace Sciences Meeting* (2014).
34. "Parallel Adaptive Detached Eddy Simulations of the EUROLIFT DLR-F11 High Lift Configuration", Rasquin, M, Chitale, KC, Ali, M, and Jansen, KE, *32<sup>nd</sup> Applied Aerodynamics Conference*, (2014).
35. "Interaction between a finite-span synthetic jet and a cross flow over a swept wing", Raquin, M, Sahni, O, and Jansen, KE, *11th US National Congress on Computational Mechanics*; Minneapolis, MN, USA; July 25-28, 2011.
36. "Numerical investigation of the interaction between a finite-span synthetic jet and a cross flow over a swept wing", Raquin, M, Mati, N, Sahni, O, and Jansen, KE, *63rd Annual Meeting of the American Physical Society, Division of Fluid Dynamics*, Long Beach, CA, USA; November 21-23, 2010.
37. "Scalable Massively Parallel Implicit Simulations of Fluid Flows to over 250,000 Processor-cores", Sahni, O, Jansen, KE, Shephard, MS and Zhou, M, , 2010 SIAM Conference on Parallel Processing for Scientific Computing, Seattle, WA, USA, Feb. 2010.
38. "Unstructured Mesh Partition Improvement for Implicit FE at Extreme Scale", Zhou, M, Sahni, O, K.D. Devine, Shephard, MS, and Jansen, KE, SIAM PP 2010, Seattle, WA. Feb. 24-26, 2010.

39. "Active flow control over a finite wing. Part 1: Experimental investigation", Wood, J, Amitay, M, and Jansen, KE, *Proc. in 61st Ann. Meeting of the Division of Fluid Dynamics of APS*, San Antonio, TX, USA, Nov. 2008.
40. "Active flow control over a finite wing. Part 2: Numerical investigation", Sahni, O, Amitay, M, and Jansen, KE, *Proc. in 61st Ann. Meeting of the Division of Fluid Dynamics of APS*, San Antonio, TX, USA, Nov. 2008.
41. "A dynamic multi-scale approach for turbulent inflow generation in spatially developing boundary layers with streamwise pressure gradients", Araya, G, Castillo, L, Jansen, KE and Meneveau, C, *Proc. in 61st Ann. Meeting of the Division of Fluid Dynamics of APS*, San Antonio, TX, USA, Nov. 2008.
42. "Parallel adaptive computation of blood flow in a 3D "whole" body model", Zhou, M, Figueroa, CA, Taylor, CA, Sahni, O, and Jansen, KE, *Proc. in 61st Ann. Meeting of the Division of Fluid Dynamics of APS*, San Antonio, TX, USA, Nov. 2008
43. "Non-Newtonian study of blood flow in an abdominal aortic aneurysm with a stabilized finite element method", Marrero, V, Sahni, O, Tichy, JA and Jansen, KE, *Proc. in 61st Ann. Meeting of the Division of Fluid Dynamics of APS*, San Antonio, TX, USA, Nov. 2008
44. Tutorial on "Interoperable Mesh and Geometry Tools for Advanced Petascale Simulation", *SC08*, Austin, TX, Nov. 2008.
45. ITAPS+PHASTA project overview, Sahni, O, Jansen, KE, and Shephard, MS, *Workshop on Leadership-class Machines, Petascale Applications, and Performance Strategies*, Snowbird, UT, USA, July 2008.
46. "Petascale Computational Fluid Dynamics" Jansen, KE, Sahni, O, Shephard, MS, Carothers, C and Oberai, A, *Presentation and Panel at Petascale Workshop joint with Teragrid '08 meeting at LasVegas in June 2008*.
47. "Fluid Dynamics Simulations on Massively Parallel Computers", Sahni, O, Zhou, M, Jansen, KE, and Shephard, MS, *Proc. in 13th SIAM Conference on Parallel Processing for Scientific Computing*, Atlanta, GA, USA, Mar. 2008.
48. "FMDB: Flexible Distributed Mesh Database for Parallel Automated Adaptive Analysis", Jansen, KE, Ovcharenko, A, Sahni, O, Shephard, MS, Xie, T, and Zhou, M, *Proc. in 2008 SIAM 13th Conference on Parallel Processing for Scientific Computing*, Atlanta, GA, USA, Mar. 2008.
49. "Numerical heat transfer analysis in turbulent wall bounded flows", Araya, G, Jansen, KE and Castillo, L, University of Karlsruhe, January 2008, Karlsruhe, Germany.
50. Mesh Control in the Adaptive Simulation of Cardiovascular Flows, Shephard, MS, Sahni, O and Jansen, KE, *Keynote Talk in 16th International Meshing Roundtable (IMR)*, Seattle, WA, USA, Oct. 2007.
51. "Adaptive Anisotropic Meshing Control for Cardiovascular Flow Modeling", Sahni, O, Jansen, KE, and Shephard, MS, *2007 SIAM conference on Computational Science and Engineering*, Costa Mesa, CA.
52. "Parallel Algebraic Multigrid for the Incompressible Navier-Stokes Equations", Sun, C, Fish, J, Jansen, KE, Waisman, H, *Proceedings of the 9<sup>th</sup> U.S. National Congress on Computational Mechanics*, San Francisco, CA, July 22-26, 2007.
53. "Convergence Studies of Turbulent Channel Flows Using a Stabilized Finite Element Method", Tejada-Martinez, AE, Jansen, KE, Lahey Jr, RT, Trofimova, A, *Proceedings of the 9<sup>th</sup> U.S. National Congress on Computational Mechanics*, San Francisco, CA, July 22-26, 2007.
54. "Turbulence in Abdominal Aorta Aneurysms", Jansen, KE, Sahni, O, Taylor, CA, *Proceedings of the 9<sup>th</sup> U.S. National Congress on Computational Mechanics*, San Francisco, CA, July 22-26, 2007.
55. "Three-Dimensional Simulations of Aortic Blood Flow and Pressure Including a Lumped Heart Model", Kim, HJ, C.A. Figueroa, Jansen, KE, Taylor, CA, Vignon-Clementel, I, *Proceedings of the 9<sup>th</sup> U.S. National Congress on Computational Mechanics*, San Francisco, CA, July 22-26, 2007.

56. "Next Steps in Supporting Parallel Adaptive Simulations", Shephard, MS, FrantzDale, B, Jansen, KE, Luo, X, Nuggehally, M, Sahni, O, and Xie, T, *Proceedings of the 9<sup>th</sup> U.S. National Congress on Computational Mechanics*, San Francisco, CA, July 22-26, 2007.
57. "A Framework for Performing Fluid Dynamics Simulations on Large-Scale Distributed Computers", Sahni, O, Jansen, KE, and Shephard, MS, *Proceedings of the 9<sup>th</sup> U.S. National Congress on Computational Mechanics*, San Francisco, CA, July 22-26, 2007.
58. "Turbulence in Cardiovascular Flows", Jansen, KE, Sahni, O, and Taylor, CA, *14th International Conference on Finite Elements in Flow Problems*, Santa Fe, New Mexico, March 26-28, 2007.
59. "Simulation-based Medicine: Predicting Outcomes of Cardiovascular Interventions using Computational Fluid Dynamics", Taylor, CA, Figueroa, CA, Wilson, NM, Spilker, RL, Kim, HJ, Vignon-Clementel, IE, and Jansen, KE, *14th International Conference on Finite Elements in Flow Problems*, Santa Fe, New Mexico, March 26-28, 2007.
60. ## **X. Research Interests**

The motivation of my research is to provide scientists and engineers with a better predictive capability for fluid dynamics problems. I am especially interested in problems where the broad range of scales expected to be present would be impractical to completely resolve, what may be termed multiscale fluids problems. The classical example is turbulence, which provided a driver for my development of very fast, massively parallel, adaptive and highly accurate finite element methods. These methods are under continuous development and application to turbulence as well as other multiscale problems such as aerodynamic flow control, blood flow within a patient-specific diseased artery, and two-phase flows. Some detail will be given in the following sections concerning work in these areas, but before discussing applications, some discussion of the enabling research in massively parallel adaptive computational fluid dynamics will be described.

### **Petascale Adaptive Computational Fluid Dynamics**

To enable simulation of real world flows, my research is focused on improvements to the numerical methods used to solve the various forms of the Navier-Stokes equations. In particular, research is underway in parallel, adaptive approaches that utilize varying grid size and varying order interpolation functions to improve the approximation of the numerical method (stabilized finite element method). Further research is underway in the development of error estimators and error indicators that are necessary to drive this h-p adaptivity. This aspect of the problem is particularly difficult for unsteady flows where previously proposed error indicators may suggest adaptivity too often or too late (i.e. fine scale structures are constantly moving). We have recently developed and applied statistics-based error adaptivity that seems to hold great promise for unsteady flows. We have pioneered the development of anisotropic adaptivity that can preserve boundary layer mesh quality for viscous flows. We have demonstrated strong scalability of the flow solver up to 32k processors and are in the process of extending this to 128k processors. We are supported by the NSF (PetaApps) and the DOE (SciDAC-ITAPS, and NERI) to address the core issues required to extend these methods and the adaptivity tools that support them to petascale computers.

### **Turbulence Simulation**

In many flows of practical interest, turbulence plays a non-negligible role. To this end, my turbulence research, at the most applied level, seeks to develop simple models that describe the net effect or average of the turbulence upon the mean flow equations (the Reynolds-averaged Navier-Stokes (RANS) equations). These models, when combined with a fully unstructured-grid finite element method, allow engineers to model arbitrarily complex flow problems. Unfortunately, these models are not yet able to describe all turbulent flows with sufficient accuracy. Therefore, other forms of turbulence simulation are also pursued. These forms are: 1) Large-Eddy Simulation (LES) where the large scale motions of the turbulence are resolved in the computation leaving only the fine scale motions to be modeled, 2) Hybrid Models (e.g., Detached Eddy Simulations (DES)) that blend LES and RANS, and 3) Direct Numerical Simulation (DNS) where all of the turbulent motions are resolved in the computational model. These alternate forms are useful both to develop a more basic understanding of the theory of turbulence and to improve the averaged models used by engineers.

To get a sense of the scale and longevity of our large-eddy simulation effort, we may contrast the first unstructured grid study of a high lift airfoil where we solved 10 million nonlinear equations at each time

step for 150 thousand time steps (1.5 trillion nonlinear equations solved) in 1996 to our current simulations which are about 100 times larger. Some other simulations that we have performed include flow over a notch, flow within an IC engine, and more basic, well-understood flows such as decay of isotropic turbulence and channel flow. We are also undertaking a significant effort to develop new models for large eddy simulation that take advantage of the natural sum decomposition of scales afforded to finite element methods when using a hierarchical basis. We have called this new model the Variational Multiscale Model because it makes use of finite element projections rather than filters to separate the scales.

### **Aerodynamic Flow Control**

The above effort in turbulence simulation has enabled a focused effort in aerodynamic flow control. The idea is to apply a relatively small flow disturbance to drive a large scale flow response. For example, synthetic jets have been shown experimentally to produce large scale flow changes (e.g., re-attachment of separated flow) from micro-scale input (e.g., a 0.1 W piezoelectric disk resonating in a cavity); a process that has yet to be explained fundamentally. Three applications of this concept are currently funded in joint, experimental-computational efforts with Michael Amitay. The first is a fundamental study of synthetic jets on wings with sweep and taper (AFOSR). The second is a detailed study of tangential blowing to reduce separation in offset engine inlet ducts (Northrup Grumman). The third is a detailed study of synthetic jets to alter the flow sufficiently to create virtual camber and thus aerodynamic control authority on commercial aircraft (Boeing support approved for Jan. 1 2009 start).

### **Virtual Vascular Surgical Planning**

Turbulence is not the only mechanism that may create a broad range of scales. Another example is flow within the human cardiovascular system. Here, we are interested in studying the flow in the vicinity of a diseased arterial section. Charles Taylor at Stanford University has developed tools to rapidly extract a patient-specific solid model of the diseased arterial section from Magnetic Resonance or Computed Tomography data. Using Magnetic Resonance techniques, unsteady (pulsatile) velocity field data can be obtained to prescribe inflow boundary conditions for the simulation domain allowing it to be placed a short distance upstream of the diseased section. The downstream boundary conditions present a much greater challenge due to the unsteady nature of the flow. Charles and I (and Ph.D. students that we co-advise) are working together to develop simplified models of the downstream vascular bed to create realistic outflow boundary conditions for the computational domain. We are currently extending these techniques to include inflow conditions and elastic modeling of the artery walls which is fully coupled to the flow solver. Through this collaboration, SimVascular, was created to combine Stanford's model extraction and problem definition tools with our flow solver and adaptivity in a NIH open-source repository housed in SimBios. We continue to improve these tools toward the goal of providing the real time feedback that surgical planners require to virtually test a variety of surgical options, choosing the best one in time to carry out a successful surgery.

### **Two-phase flow simulation**

Richard Lahey, and I have been investigating extensions to our methods to enable two-phase flows to be efficiently simulated. We have developed Level Set methods and have applied these approaches to a variety of flows including sonoluminescence, bubbly flows, water-jet bubbled ingestion, and turbulent

annular flow. Michael Podowski and I are currently supported under a DOE NERI grant to apply these methods to nuclear reactor accident scenarios.

### **Pre and post-processing**

The broad spectrum of applications listed above would not be possible without significant development of pre- and post-processing techniques. In particular, as we have moved to a hierarchical basis (where degrees of freedom are no longer limited to the nodes of a mesh but are now associated with edges, faces and regions as well) it became very important to link our pre-processing to a solid model description of the flow. This link is critical when performing adaptivity to insure that refined meshes continue to match, and therefore improve, the description of the boundary. Furthermore, by associating boundary conditions with the solid model faces, not only is the initial work of the user reduced but subsequent adaptivity will automatically inherit the appropriate boundary conditions.
