Research Interests

My research focuses on building and deploying practical systems that span multiple disciplines, including networks and distributed systems, mobile systems, internet protocols and algorithms, LTE and 5G networks and security, video streaming, and storage systems. Previously, I co-authored CUBIC (RFC 8312), which is the default TCP congestion control algorithm for Linux/Android, MacOSX and Windows, and is currently being used by the majority of Internet servers around the world and by several billion internet devices.
