

Gordan Gjerapic is a Research Associate at the University of Colorado Boulder. He holds a M.Eng. degree in civil engineering from the University of Zagreb, Croatia and MS and Ph.D. degrees in civil engineering from the University of Colorado Boulder. For more than 20 years, he has been solving complex geo-environmental and rock mechanics problems dealing with numerical modelling of deformation, stability, seepage, contaminant transport and tunneling working both as a consultant for Golder Associates (2001-2020) and as a Research Associate at the University of Colorado (2017-present). He actively participated in the design of waste storage facilities including municipal, hazardous, nuclear and mine waste repositories and was involved in numerous geotechnical investigations of soil and rock sites. His expertise includes geo-mechanical, multi-phase and unsaturated flow modelling, piping design, water balance modelling, foundation and embankment stability and stability of underground openings. He specializes in testing and modelling of materials subjected to large strain consolidation and creep.
