RESEARCH EXPERIENCE

Research Scientist, NOAA CSL, December 2020 – present

- Measure NO, NO₂, and NO_y by laser-induced fluorescence
- Deployed on the NASA WB-57 for ACCLIP test flights
- Developing a method to measure ¹⁴NO_y and ¹⁵NO_y for source apportionment

Research Chemist, NIST Boulder, June 2017-December 2020

- First field deployment of a mid-infrared DCS to measure ethane and heavy hydrocarbons at a drilling site.
- Measured acetone and isopropanol from a controlled release using a mid-infrared DCS system.
- Fielded a dual comb system to measure emissions of CH₄ and C₂H₂ from controlled leaks using a UAS.
- Measured CO₂, CH₄, and H₂O across the city of Boulder using a dual frequency comb spectrometer and coupled with Gaussian plume modeling to quantify city emissions. Agreed within 30% of the city bottom-up inventory, demonstrating a new instrument for top-down measurements.

Postdoctoral Research Associate, NIST Boulder, Dr. Nathan Newbury, postdoc advisor, June 2015 to June 2017

- Ran the first comparison between two dual frequency comb instruments to determine instrument accuracy, precision, and repeatability. Experiment was performed over the open atmosphere, rather than in a laboratory with an open-pass cell. This enabled a comparison over a wide range of atmospheric conditions and trace gas concentrations.
- Performed first frequency comb measurements of broad-band gas-phase species in the laboratory.

Graduate Research Assistant, University of Colorado Boulder, Prof. Rainer Volkamer, Ph.D. advisor, Aug. 2008 to June 2015

- Used atmospheric simulation chambers to probe glyoxal uptake onto model inorganic aerosols to study effects of chemical composition, pH, RH, and aerosol liquid water on products formed, product reversibility, and Henry's law constants.
- Developed a novel method for measuring salting constants for water soluble aerosol precursor molecules using mass spectrometry and GC-FID.
- Identified products formed in glyoxal aerosol using ultra high resolution nano-DESI mass spectrometry, from which aerosol phase mechanisms for product formation can be inferred.
- Modeled SOA formation from glyoxal in Mexico City. Determined that glyoxal can form up to ~20% of the measured aerosol mass and that it can significantly help close the aerosol O/C gap, but by itself is not sufficient.
- Operated Cavity-Enhanced DOAS instruments (blue and UV ranges) to measure the gas-phase concentrations of NO₂, glyoxal, O₄, water, and HONO in both the field (CalNex 2010) and laboratory (PSI, Euphore, NCAR).

Undergrad Research Assistant, Caltech, Prof. Geoff Blake, June 2007-December 2007

- Assisted with building terahertz time domain system for studies of molecules found in interstellar space.

Summer Undergrad Research Fellow, Caltech, Prof. Jack Beauchamp, March-August 2006

- Studied ozonolysis of specific amino acids in model peptides using force-induced droplet ionization in conjunction with an electrospray quadrupole mass spectrometer to determine the products of and develop mechanisms for peptide ozonolysis.
- Studied amino acid and water clustering using electrospray quadropole mass spectrometry.

REU Fellow, University of Connecticut, Prof. Richard Parnas, June-August 2005

- Studied rheology of wheat gluten/additive mixtures in acetic acid to determine the reaction rates.
- Used atomic force microscopy to study surface structure and elasticity of wheat gluten/polymer blends.

GRANTS

- NIST Technology Partnership Office, Co-I. Outdoor Trace Gas Monitoring Instrument for Industrial Applications. Award period: Jan. 2020 – Dec 2020. Award amount: \$250,000 USD
- NASA ROSES Instrument Incubator, Co-I. Frequency Comb Spectrometer for Satellite Atmospheric Remote Sensing. Award period: Mar. 2020-Sept. 2021. Award amount: \$1M USD.
- JPL/Caltech Center Innovation Fund, NIST Co-I. STARS – Spectroscopy Towards occultation for Atmospheric Remote Sensing. Award period: Jan. 2020-Sept. 2020. Award amount: \$100,000 USD

AWARDS

- DOC Gold Award (shared) for spectroscopy, November 2020
- CO-Labs Governor's Award for High Impact Research, November 2019
- National Research Council Postdoctoral Research Fellowship, February 2015
- CIRES Graduate Research Fellowship, Fall 2014
- Graduate Teaching Award for General Chemistry, Fall 2008, Fall 2013
- Graduate Teaching Award for Analytical Chemistry, Spring 2009, Spring 2013
- NSF Graduate Research Fellowship, September 2009
- CU Department of Chemistry and Biochemistry Fellowship, August 2008

TEACHING EXPERIENCE

CHEM 4181, Instrumental Analysis Laboratory with Environmental Emphasis, University of Colorado Boulder, Spring 2014, Instructor of Record, 21 students in class

- Developed entirely new lecture material for data analysis and scientific writing with a focus on active learning, small group work, and critical thinking.
- Assisted in the development of a new experiment using ATR-FTIR.

CHEN 1211/ CHEM 1221, General Chemistry for Engineers and Engineering General Chemistry Lab, University of Colorado at Boulder, Fall 2013, Lead TA

- Developed recitation material including weekly examples of how chemistry topics are used in the real world in a variety of applications including environmental, biological and medical, and transportation examples.
- Developed non-traditional interactive recitation materials including science bingo and exam review jeopardy.
- Taught guest lecture on acid base chemistry to a lecture of 320 students.
- Assisted with course management including proofing exams, running exams when the professor was out of town, and semi-quantitative statistical analysis of course grades.
- Taught one recitation section and lab in the course and graded homework and lab reports for this section.

CHEM 4181, Instrumental Analysis Laboratory, University of Colorado Boulder, Spring 2013, Lead TA

- Tested and assisted with the development of new labs including atomic absorption and HITRAN modeling component for FTIR.
- Developed course material for scientific writing.
- Ran one laboratory section and graded homework and lab reports.

CHEM 1113, General Chemistry, University of Colorado Boulder, Fall 2012, TA

- Sole TA for a special Health Providers Residential Academic Program section of General Chemistry.
- Created short recitation lectures (~10-15 minutes) on how chemistry is important for medicine using topics covered in class, e.g. radionuclides in diagnostic tests, and the importance of molecular shapes in developing drugs.
- Created and presented an exam review on the laboratory material.
- Taught one guest lecture on the ideal gas law and modifications for real gases, including developing clicker questions.
- Taught two recitations and laboratory sections and graded lab reports for these sections.

CHEM 4171, Instrumental Analysis, University of Colorado at Boulder, September 2011, September 2012, and September 2013, Substitute Instructor.

- Developed and presented two lectures on calibration curves, one on HPLC, two on FTIR, and an Excel data analysis and graphing tutorial.

CHEM 4181, Instrumental Analysis Laboratory with Environmental Emphasis, University of Colorado at Boulder, Spring and Summer 2009, TA

- Helped students develop capstone independent projects using one or more techniques listed above.
- Developed curriculum to align laboratory experiments with available equipment, change course emphasis to instrumentation, and move to more sustainable experiments.
- Developed a fluorescence lab investigating quinine in tonic water, rewrote lab manual, and developed homework assignments.

CHEN 1211/CHEM 1221, General Chemistry for Engineers and Engineering General Chemistry Lab, University of Colorado at Boulder, Fall 2008, Teaching Assistant

- Developed and presented recitation material based on weekly lectures, wrote and graded weekly quizzes

Chem 1a/b, General Chemistry, Caltech, Fall 2007-Winter 2008, Undergraduate Teaching Assistant

- Developed and presented recitation material based on weekly lecture material, wrote quiz and exam questions

Chem 4b & Chem 3b, Synthesis and Analysis of Organic and Inorganic Compounds & Experimental

Procedures of Synthetic Chemistry, Caltech, Winter 2007 & Spring 2007, Undergraduate Teaching Assistant

- Supervised chemical engineering student experiments twice weekly in the lab. Included office hours, grading lab reports, and NMR maintenance.

SERVICE

- Reviewer for: Atmospheric Measurement Techniques, Atmospheric Chemistry and Physics, Environmental Science and Technology, JGR-Atmospheres, Atmosphere, Journal of Oceanic and Atmospheric Technology
- Reviewer for: DoE SBIR proposals, NASA NPP proposals, NASA IIP proposals

OUTREACH & COMMUNITY SERVICE

Mentor, Summer High school Internship Program, NIST-Boulder, Summer 2016

Reviewer for Environmental Science and Technology, Atmospheric Chemistry and Physics, Atmospheric Measurement Techniques

Outstanding Student Poster Award judge, AGU Fall Meeting, 2016

High school student research mentor, February – August 2016

CU Wizards assistant, November 2014, Speed

Boulder Valley Science Fair Judge, February 2012, Middle school judge
